

TASK SUBMISSION DOCUMENT

Alindo Tech Frontend Developer Internship

Name	Nowsheen	Task No.	Task 2
Email	25215a0527@bvr.it.ac.in	Date	June 2025
GitHub	nowsheenmohd546	Status	Completed

Task 2 — JavaScript Mini Project: To-Do List App

An interactive To-Do List application built with vanilla JavaScript using DOM manipulation. Features include adding tasks with priority levels, marking tasks complete, filtering, clearing completed tasks, live stats, and an aesthetic doodle background. Data persists using localStorage.

GitHub Repo	https://github.com/nowsheenmohd546/To-Do-list

Requirements Checklist

- ✓ Built using vanilla JavaScript (ES6+) with DOM manipulation
- ✓ Add tasks with High / Medium / Low priority levels
- ✓ Mark tasks as complete with visual strikethrough
- ✓ Delete individual tasks
- ✓ Filter tasks by All / Pending / Completed
- ✓ Clear all completed tasks at once
- ✓ Live stats counter (Total, Pending, Done)
- ✓ Tasks persist using localStorage (survive page refresh)
- ✓ Aesthetic doodle background with stars, hearts, flowers, butterflies
- ✓ Fully responsive on mobile and desktop
- ✓ Live hosted on GitHub Pages
- ✓ Source code on public GitHub repository

Project File Structure

todo-app/ ■■■ index.html ← App structure, SVG doodle background, form & task list ■■■
style.css ← Aesthetic styling, glassmorphism card, animations ■■■ script.js ← All JS logic: add, delete, toggle, filter, localStorage

Key Code Snippets

1. Add Task Function (script.js)

```
function addTask() { const input = document.getElementById('task-input'); const priority = document.getElementById('priority-select').value; const text = input.value.trim(); if (!text) return; const task = { id: Date.now(), text: text, priority: priority, done: false }; tasks.unshift(task); saveTasks(); renderTasks(); input.value = ''; }
```

2. Toggle & Delete (script.js)

```
function toggleTask(id) { tasks = tasks.map(t => t.id === id ? { ...t, done: !t.done } : t); saveTasks(); renderTasks(); } function deleteTask(id) { tasks = tasks.filter(t => t.id !== id); saveTasks(); renderTasks(); }
```

3. localStorage Persistence (script.js)

```
// Save to localStorage function saveTasks() { localStorage.setItem('tasks', JSON.stringify(tasks)); } // Load on page start let tasks = JSON.parse(localStorage.getItem('tasks')) || [];
```

4. Doodle Background (index.html)

```
<svg class="doodle-bg" viewBox="0 0 1440 900"> <text x="60" y="80" font-size="22" fill="#a78bfa">◆</text> <text x="40" y="200" font-size="28" fill="#f9a8d4">■</text> <text x="80" y="450" font-size="32" fill="#fcd34d">★</text> <text x="1250" y="400" font-size="26" fill="#f9a8d4">■</text> <!-- + more stars, hearts, clouds, sparkles --> </svg>
```

Technologies Used

Technology	Purpose
HTML5	App structure, SVG doodle background
CSS3	Glassmorphism card, gradients, animations, responsive
JavaScript ES6+	DOM manipulation, task logic, event handling
localStorage API	Persistent data storage across sessions
IntersectionObserver	Scroll-based active state tracking
GitHub Pages	Free live hosting
